

# 2023 UNION PACIFIC SUSTAINABILITY METRICS

# UNION PACIFIC SUSTAINABILITY METRICS

Providing detailed, transparent, and accessible information on sustainability topics is an important component of our sustainability strategy. This webpage combines data reported in our Building America Report, portions of our Proxy Statement, and other sustainability-related data points into one table that is more accessible to our stakeholders. Some of the figures and information in the following tables have been compiled and, where necessary, restated from previous sustainability reports to reflect changes in reporting. All currency-related values are reported in US dollars.

Reporting boundary: Data is updated, at a minimum, on an annual basis to reflect any changes in activities, methodologies, frameworks, or data availability covered by this boundary. The sustainability data metrics reported cover all activities consolidated for financial reporting purposes with one exception: unless noted in the footnotes, data presented below does not include activities by MHX, a transload subsidiary acquired by Union Pacific in February 2023. For perspective, MHX revenue comprises less than 0.5% of total Union Pacific revenue, and MHX's employee full-time equivalent headcount comprises less than 0.5% of total Union Pacific headcount. We expect to integrate additional MHX sustainability data into our full sustainability disclosures for reporting in 2025.

Data	Unit	2018	2019	2020	2021	2022	2023
<b>ACTIVITY DATA</b>							
Route Miles <sup>1</sup>	Miles	32,326	32,340	32,313	32,452	32,534	<b>32,693</b>
Gross Ton-Miles (GTM) <sup>2</sup>	Billions	928.6	846.6	771.8	817.9	843.4	<b>837.5</b>
Revenue Ton-Miles (RTM) <sup>3</sup>	Billions	474.0	423.4	385.0	411.3	420.8	<b>413.3</b>
Average Max Train Length <sup>4</sup>	Feet	7,036	7,747	8,798	9,334	9,329	<b>9,356</b>
Locomotive Productivity <sup>5</sup>	GTM / Horsepower-Day	106	120	137	133	125	<b>129</b>
Freight Car Velocity <sup>6</sup>	Daily Miles Per Car	198	209	221	203	191	<b>204</b>
Operating Revenues <sup>7</sup>	Millions of US Dollars	22,832	21,708	19,533	21,804	24,875	<b>24,119</b>

<sup>1</sup> Excludes other main line, passing tracks and turnouts, and switching and classification yard lines.

<sup>2</sup> Gross ton-miles are calculated by multiplying the weight of loaded and empty freight cars by the number of miles hauled.

<sup>3</sup> RTMs are calculated by multiplying the weight of freight by the number of tariff miles.

<sup>4</sup> Train length is the average maximum train length on a route measured in feet.

<sup>5</sup> Locomotive productivity is gross ton-miles per average daily locomotive horsepower.

<sup>6</sup> Freight car velocity measures the average daily miles per car on our network. The two key drivers of this metric are the speed of the train between terminals (average train speed) and the time a rail car spends at the terminals (average terminal dwell time).

<sup>7</sup> Consists of freight revenues, other subsidiary revenues, accessorial revenues earned we earn when customers retain equipment owned or controlled by us or when we perform additional services such as switching or storage, and miscellaneous contract revenue.

Environmental Liability Accrued at Year End	\$		\$567,973	\$400,000	\$0	\$6,750	\$0

1 Restatement/Verification: Union Pacific works with independent organizations to develop an accurate estimate of its annual GHG emissions and continually evaluates its greenhouse gas and energy data to produce a calculation of its environmental footprint. In this report, some emissions data have been restated from previous sustainability reports to reflect changes in reporting. As part of our SBTi target revalidation work, data and calculation methodologies for each Scope category in 2018 were reexamined to revalidate our target baseline year, and 2022 and 2023 calculation methodologies are consistent with our 2018 baseline methodologies.

2 Total Scope 1 emissions exclude the CO<sub>2</sub>e portion of Scope 1 emissions derived from the combustion of biogenic fuels, including biodiesel and renewable diesel fuels. Our Scope 1, 2, and 3 reporting also excludes the GHG contribution of MHX, a transload subsidiary acquired by Union Pacific in February 2023. MHX's GHG emissions for all of 2023 were estimated as: Scope 1: 6,385 mtons CO<sub>2</sub>e, Scope 2: 77 mtons CO<sub>2</sub>e, and Scope 3 (categories 6 & 9): 3,787 tons CO<sub>2</sub>e.

3 Beginning in 2023, we began using historical consumption as the basis for estimating missing Scope 2 electricity invoices. We have updated our 2022 actual Scope 2 emissions to match our revised actual spend with more complete data, including the exclusion of spend unrelated to electricity consumption.

4 Methodology change for 2023: we identified 2022 spend that should be excluded from our GHG emissions calculations, and have adjusted emissions calculations based on spend for the impact of inflation. Total impact to 2022 emissions is <1%.

5 Increase in emissions in 2023 vs 2022 due to increase in activity as well as changes to EPA emission factors. .

6 2023 vs 2022 increase driven by improved leased space data capture.

7 Methodology change in 2023: we began capturing actual fuel gallons consumed vs data-based estimates provided in 2022.

8 Sum utilizes location-based Scope 2 GHG emissions.

9 Gross ton-miles are calculated by multiplying the weight of loaded and empty freight cars by the number of miles hauled.

10 Revenue ton-miles are calculated by multiplying the weight of freight by the number of tariff miles.

11 Revenue dollars consists of freight revenues, other subsidiary revenues, accessorial revenues earned we earn when customers retain equipment owned or controlled by us or when we perform additional services such as switching or storage, and miscellaneous contract revenue.

12 Gross ton-miles are calculated by multiplying the weight of loaded and empty freight cars by the number of miles hauled.

13 Revenue ton-miles are calculated by multiplying the weight of freight by the number of tariff miles.

14 Revenue dollars consists of freight revenues, other subsidiary revenues, accessorial revenues earned we earn when customers retain equipment owned or controlled by us or when we perform additional services such as switching or storage, and miscellaneous contract revenue.

15 Gross ton-miles are calculated by multiplying the weight of loaded and empty freight cars by the number of miles hauled.

16 Revenue ton-miles are calculated by multiplying the weight of freight by the number of tariff miles.

17 Revenue dollars consists of freight revenues, other subsidiary revenues, accessorial revenues earned we earn when customers retain equipment owned or controlled by us or when we perform additional services such as switching or storage, and miscellaneous contract revenue.

18 Union Pacific has committed to reduce absolute Scope 1 and 2 GHG emissions by 50.4% by 2030 from a 2018 base year. This target is approved by the Science Based Target Initiative, and is based on SBTi's revised minimum ambition guidance of a below 1.5°C global warming scenario. This current target was updated in early 2024 from our previous 2021 commitment to reduce our Scope 1 and 2 emissions on an absolute basis by 26% from our 2018 baseline by 2030.

19 Union Pacific has committed to reduce Scope 3 absolute emissions from our purchased goods and services, capital goods and fuel- and energy-related activities 50.4% by 2030 from a 2018 base year. This target is approved by the Science Based Target Initiative, and is based on SBTi's revised minimum ambition guidance of a below 1.5°C global warming scenario. This current target was updated in early 2024 from our previous 2021 commitment to reduce our Scope 3 to locomotive well-to-wheel emissions by 26% vs a 2018 baseline. As part of our SBTi target revalidation work, data and calculation methodologies for each Scope category in 2018 were reexamined to revalidate our target baseline year, and 2022 and 2023 calculation methodologies are consistent with our 2018 baseline methodologies.

20 Reported statistic is based on an estimate of average tier for locomotive fleet, locomotive fuel consumption, and EPA emission factors.

21 Total usage calculation includes consumed electricity and all carbon-based fuels (diesel, propane, etc.)

22 Total weight of waste generated includes data tracked by Union Pacific for used rail ties, scrap metal, and impacted soil. Day-to-day office and yard waste quantities are provided by our third-party waste disposal contractors on an annual basis. Where data was not available, estimates were made based on industry standards. Definitions of hazardous and non-hazardous waste are based on state and federal regulations, which we assess on a case-by-case basis depending on the condition of the waste.

23 Union Pacific procures the vast majority of its water supplies from municipal/local water authorities and uses a software application to track monthly water withdrawals associated with approximately 1,400 municipal water accounts across the company's network. This system tracks 100% of the company's municipally-sourced water withdrawals. In select locations (representing a small fraction of the company's total water withdrawals), the company extracts water from railroad-owned groundwater wells or surface water sources. These locations are managed at the local level in accordance with federal, state and/or local regulatory requirements that pertain to small public water systems or independent water wells. The majority of these locations are not metered. Consequently, the volumes are not tracked.

24 The company utilizes a software application to track monthly sewer discharge volumes where meters are present. The company also owns and operates 85 waste water treatment facilities across its network. Water discharge volumes are monitored using electronic flow meters or estimated based on pump hour meter run times. Discharge data and regulatory reporting are generated monthly and managed in accordance with applicable federal, state and local regulatory requirements.

25 We conducted environmental and biodiversity impact evaluations on 1,318 bridge, capacity and commercial facilities construction sites from 2019-2023. Of these locations, approximately 1,250 involved the eventual utilization of biodiversity management plans in consideration of waterways, wetlands, and threatened and endangered species and migratory birds. For these locations, we followed the regulatory bodies' prescribed guidance for how to manage issues and impacts associated with these resources. We do not track area estimates for these projects.

26 Only those fines or penalties amounting to over \$10,000 have been included. The values refer to the year in which the incident occurred, not when the fine or penalty was paid.

1 Beginning with 2022 reporting, interns are excluded from number reported. Starting in 2023, this number includes MHX employees. MHX employees are also included in the breakdown below of craft professionals and management employees.

2 Includes total workforce, excluding part-time and intern employees.

3 Includes part-time and intern employees.

4 Beginning with 2022 reporting, interns are excluded from number reported.

5 Includes voluntary quits employees and retirements.

6 Reported data is self-reported.

7 Reported data is self-reported.

8 Reported data is self-reported. Numbers not summing to 100% are due to rounding.

9 Numbers not summing to 100% are due to rounding.

10 Reported data is self-reported. Numbers not summing to 100% are due to rounding.

11 All numbers in this section include intern employees. Reported data is self-reported.

12 Sum of management and craft employee new hires.

13 Methodology: number of positions filled by current employees (internal hire) divided by total number of positions hired for the year, included entry-level craft employee positions normally hired externally.

14 Hiring incentives ranged from \$10,000 to \$50,000 in specific locations throughout 2023 and were paid in multiple installments. Expenses include all payments actually incurred during the year, including multiple recurring payments to the same employee

15 Reported data is self-reported.

16 Each year, Union Pacific performs a statistical analysis to assess employee pay for gender and minorities based on compensation data, including base pay, bonuses, and long-term incentives. The adjusted gap listed measures the median base pay between substantially similar groups of employees when adjusting for job related control factors such as role, grade, job level, experience, and location. The unadjusted gap measures the median base pay across the organization without regard for roles, groups or applied controls. Employees whose pay is determined by a collective bargaining agreement are not included in the study. Otherwise, all employees of the Company are included in the study.

17 Management employees on long-term disability or military service for the entire year do not receive a formal performance review.

18 Data only includes employee volunteer hours where the employee contributed greater than 40 hours.

19 Because new craft professional hires typically incur more training hours in their first year of employment, average training hours may fluctuate in part based on the relative proportion of new hires to total employees. All numbers in this section include intern employees.

20 Prior to 2021, ethics training was only provided to management employees. The stated percentages for all years are the percentage of all employees - management and craft professional - who completed ethics training in the given year.

21 In 2020, the COVID pandemic severely restricted training completions due to limitations on employee travel and reducing new employee hiring activity.

22 Reflects % of total workforce who participated in D&I training.

23 Reflects % of total workforce completing at least one environmental training course.

1 Weekly inspections, multiplied by miles of track on which those inspections occurred. Result divided by total main track miles.

2 Data based on FRA inspectors writing inspection reports with recommended violations. Union Pacific did not receive violations notices on all recommended violations.

3 Union Pacific defines a breach as a penetration of the system in which the attacker obtains confidential information

4 "Minority-owned" suppliers include those owned by African-American, Asian-Indian American, Asian-Pacific American, Latino American, and Native American individuals.

5 "Women-owned" includes women-owned business and women-owned small businesses.

6 "Veteran-owned" includes veteran-owned and service-disabled veteran-owned individuals.

7 "Other" includes LGBT Business Enterprise, 8(a) Business Enterprise, Disadvantaged Business Enterprise, HubZone Business Enterprise, and Small Disadvantaged Business.

8 "Strategic Suppliers" provide critical materials or services that are difficult to obtain from other suppliers, whose failure would impact UP operations, and have a high capacity to add value through product innovation or Total Cost of Ownership improvement.

9 Sustainability training offered to supply chain managers every other year. Reflects the % of employees who took the training the most recent time it was offered.

10 Live training is required for new management employees, and current employees moving from craft professional to management positions.

11 Required for management and American Railway and Airway Supervisors Association (ARASA) employees.

12 Required for specific location, not entire employee population (CA, NY, IL, Chicago).

13 Required for certain management employees only.
