SUPPORTING ARKANSAS' ECONOMY

Union Pacific operates some of its largest and most modern facilities within Arkansas, providing resources to businesses and industries seeking growth opportunities.

Union Pacific's second-largest freight car classification yard is in North Little Rock. A classification yard is where rail cars are sorted and trains built for departure. A variety of commodities move through the yard with service directly supporting the Little Rock Port. Additional yard locations across the state and a \$70 million state-of-the-art, 600-acre intermodal facility at Marion help Union Pacific provide safe, reliable and efficient customer service.

From 2014-2018, Union Pacific spent more than \$767 million on Arkansas tracks, structures and facilities. This commitment to providing a safe and efficient network allows Union Pacific to be a valuable resource in attracting new business and industry.

Union Pacific proudly supports Arkansas nonprofit organizations through its Community Ties Giving Program. In 2018, the company provided \$353,200 to charitable

UNION PACIFIC IN ARKANSAS

groups, including Associated Industries of Arkansas Foundation, Museum of Discovery and Literacy Council of White County. Grants are awarded to programs meeting one of Union Pacific's philanthropic objectives: helping communities prevent and prepare for accidents and emergencies; fostering skills development for family-supporting jobs; and creating vibrant community spaces.

DRIVING INNOVATION AND SUSTAINABILITY

Union Pacific's rails are technological runways enhanced with GPS, specialized sensors and, in some areas, Positive Train Control (PTC). PTC is an advanced system designed to automatically stop a train before certain incidents occur, such as train-to-train collisions and derailments caused by excessive speed or movement through misaligned track switches. PTC is installed on 100 percent of required Union Pacific rail lines; implementation efforts continue to ensure interoperability with other freight and passenger railroads operating on our tracks by 2020.

North Little Rock is home to the Downing B. Jenks locomotive repair shop – the largest and most modern on the system. It employs skilled workers from a variety of crafts who perform heavy maintenance on Union Pacific's more than 7,000 locomotives. This facility has played a critical role in equipping Union Pacific's fleet with the technology necessary to utilize PTC.

Union Pacific is using technology to drive fuel efficiency. One train can take several hundred trucks off Arkansas' already congested highways. A Union Pacific train can move one ton of freight 444 miles on a single gallon of diesel, generating a carbon footprint that is 75 percent less than trucks.

AMERICA'S PREMIER RAILROAD

One of America's most recognized companies, Union Pacific Railroad (NYSE: UNP) connects 23 states in the western two-thirds of the country by rail, providing a critical link in the global supply chain. From 2009-2018, Union Pacific invested approximately \$34 billion in its network and operations to support America's transportation infrastructure. The railroad's diversified business mix includes Agricultural Products, Energy, and Industrial and Premium business groups. Union Pacific serves many of the fastest-growing U.S. population centers, operates from all major West Coast and Gulf Coast ports to eastern gateways, connects with Canada's rail systems and is the only railroad serving all six major Mexico gateways. Union Pacific provides value to its roughly 10,000 customers by delivering products in a safe, reliable, fuel-efficient and environmentally responsible manner.
