## UNION PACIFIC IN CALIFORNIA

Union Pacific's California operations originate from two central hubs, the Northern California Service Unit and the Los Angeles Service Unit. Service units are the heart of freight operations, serving as a vital link connecting north-south transportation service and east-west corridors with international commerce.

The "I-5/Hwy 99 Corridor" through California is the most efficient route serving the rich agricultural central valley and the ports of Los Angeles, Long Beach and Oakland.

Union Pacific freight operations in California handle an array of important commodities, including import-export automobiles and premium intermodal cargo at the Intermodal Container Transfer Facility (ICTF). Other common freight hauled throughout the Golden State includes chemicals, manufactured goods, fruits, vegetables and canned goods.

In the last five years, 2017-2021, Union Pacific invested more than \$1.3 billion strengthening California's transportation infrastructure.

# UNION PACIFIC IN CALIFORNIA

Extensive commuter trains, including Amtrak, operate on Union Pacific tracks throughout the state, providing a safe and efficient alternate mode of transportation while reducing emissions on congested California highways. A Union Pacific train can move one ton of freight 463 miles on a single gallon of diesel, generating a carbon footprint that is 75% less than trucks.

Union Pacific proudly supports California nonprofit organizations through its Community Ties Giving Program. In 2021, the company provided more than \$1.6 million to charitable groups, including Kingdom Causes, Boys & Girls Club of Placer County and California Fire Foundation. Grants are awarded to programs meeting one of Union Pacific's philanthropic objectives: helping communities prevent and prepare for accidents and emergencies; fostering skills development for family-supporting jobs; and creating vibrant community spaces.

## INNOVATIVE SOLUTIONS

Union Pacific's rails are technological runways enhanced with GPS, specialized sensors and, in some areas, Positive Train Control (PTC). PTC is an advanced system designed to automatically stop a train before certain incidents occur, such as train-to-train collisions and derailments caused by excessive speed or movement through misaligned track switches. PTC is installed on 100% of required Union Pacific rail lines; implementation efforts also ensured interoperability with other freight and passenger railroads operating on our tracks.

Unmanned Aerial Systems (UAS), or drones, are part of Union Pacific's safety tool kit, collecting valuable information at derailment sites and natural disaster incidents, allowing the company to assess its infrastructure and respond while keeping employees out of harm's way. Union Pacific is pioneering autonomous drone infrastructure inspection technology, enabling the company to fly drones in places without GPS coverage, such as within or under a large metal bridge or into deep culverts.

## ENVIRONMENTAL INITIATIVES

Union Pacific's vision of building America involves protecting and strengthening the environment. Several initiatives and innovative technologies are helping achieve Union Pacific's environmental goals in California.

New locomotives meeting the EPA's stringent Tier 4 emissions standards have been added to UP's fleet over the last few years, reducing particulate emissions by as much as 90% during operations.

## AMERICA'S PREMIER RAILROAD

Union Pacific Railroad is the principal operating company of Union Pacific Corporation (NYSE: UNP). One of America's most recognized companies, Union Pacific Railroad connects 23 states in the western two-thirds of the country by rail, providing a critical link in the global supply chain. From 2012-2021, Union Pacific invested approximately \$35 billion in its network and operations to support America's transportation infrastructure. The railroad's diversified business mix includes its Bulk, Industrial and Premium business groups. Union Pacific serves many of the fastest-growing U.S. population centers, operates from all major West Coast and Gulf Coast ports to eastern gateways, connects with Canada's rail systems and is the only railroad serving all six major Mexico gateways. Union Pacific provides value to its roughly 10,000 customers by delivering products in a safe, reliable, fuel-efficient and environmentally responsible manner.
