

# 3 Ways to Connect With Rail

1

## GO MULTI-MODAL

If your origin (or destination) isn't rail served, check out your transloading and intermodal shipping options, which allow you to use rail by **transferring products between trucks and trains.**

2

## REVITALIZE AN EXISTING RAIL CONNECTION

If you have tracks at your door but they're out of commission, that can change. Work with the rail carrier to **get them active again.**

3

## ESTABLISH A NEW CONNECTION

If you want to build tracks that lead directly to your facility, that's also an option. Start by working with your rail carrier and an engineering firm to make a plan to **connect to the rail network.**
