

WHAT IS A TMS?

TMS stands for "Transportation Management System."
A TMS helps organizations plan and coordinate the shipping, tracking and delivery of freight and is intended to streamline the shipping process.

What are the 3 types of TMS platforms?

Home-Grown

An enterprise solution that is built by a company for its own use and hosted on its own premises.

2

3

Cloud

A cloud-based platform, which is hosted on the vendor's servers and is available to you via the Internet. This is often called Software-as-a-Service (SaaS), and such platforms are maintained by the vendor.

On-Premise

A provider-purchased platform that is purchased from a TMS vendor but is kept on premises and maintained by the purchasing company.
