

# 4 Ways to Reduce Fulfillment Costs

## Supply Chain Costs to Consider Beyond Transportation

### 1. Focus on Forecasting

Proper forecasting can help you avoid the costs associated with over- or under-production. Technology can assist with forecasting models that drive accurate production levels.

### 2. Close Technology Gaps

A seamless technology environment can help your team work more efficiently, respond quickly to industry disruptions, and make a solid logistics game plan for when disruptions happen.

### 3. Consider Inbound Shipping Costs

Creating a unified plan across functions (inbound and outbound shipping) and locations can simplify complexity, cut administrative time, reduce the risk of supply chain failures and may yield better pricing.

### 4. Ditch the "We've Always Done it This Way" Mentality

Evaluating providers and diversifying your supply chain portfolio with multi-modal options can help you save.
