BUILDING AMERICA

Pipe Transportation Solutions

Extending your reach through rail

Union Pacific Railroad safely and efficiently delivers thousands of different products for customers across North America. Our pipe shipping expertise can simplify your supply chain, moving more product more efficiently.

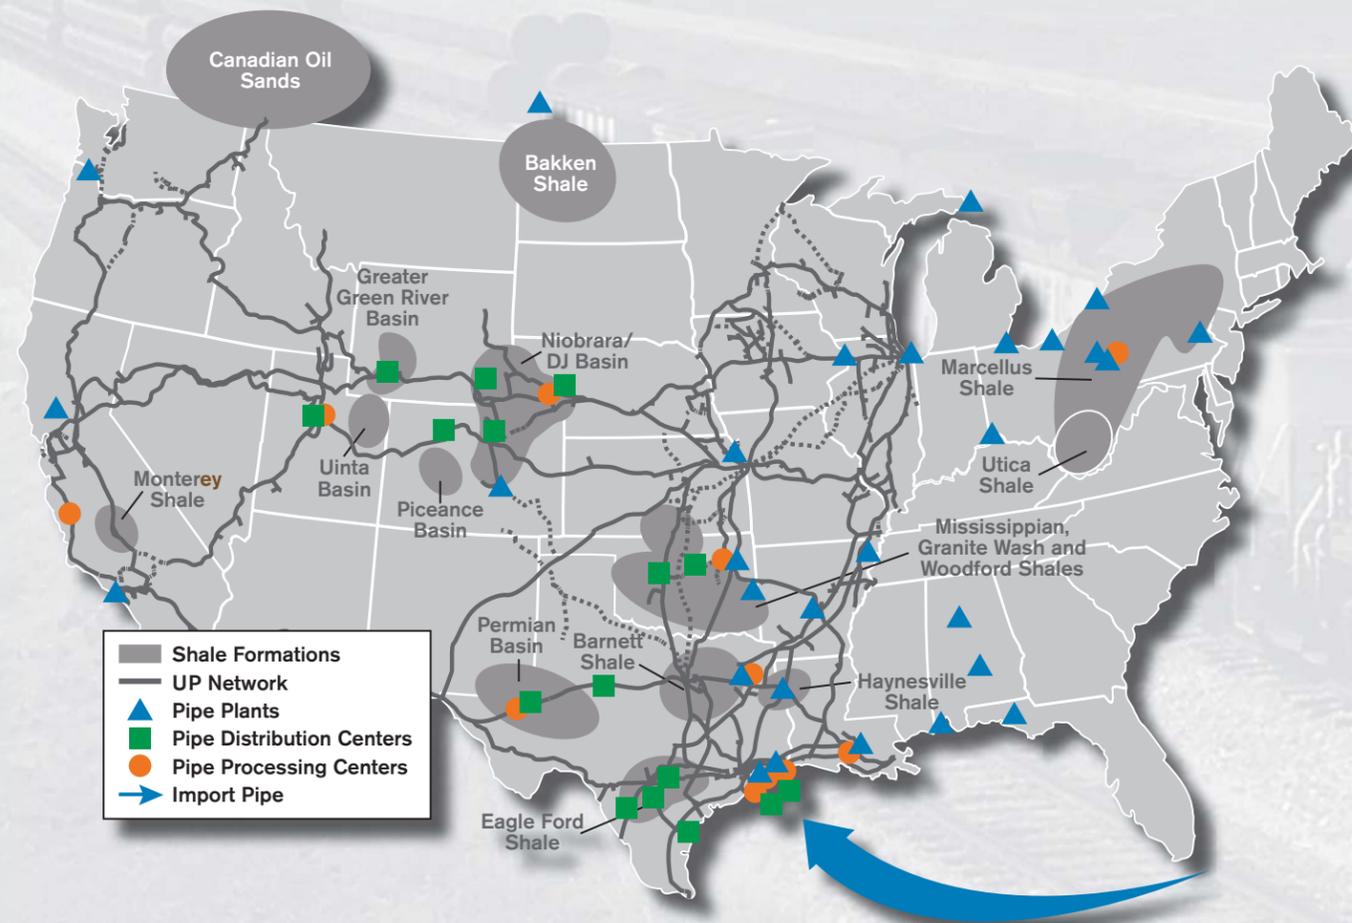

Our extensive network reaches about 75 percent of all shale plays in the United States, aligning geographically with new projects underway in the western two-thirds of the United States. Union Pacific seamlessly connects to Class I eastern rail carriers, has six major gateways to Mexico and reaches Canadian rail carriers.

Never shipped by rail? Don't have direct rail access? We have solutions. Our expert team can help you find shipping solutions for various types of pipe utilizing our Pipeline Express, Drill Pipe and Structural Pipe service solutions.

Our Pipe Shipping Expertise

Key Shale and Pipe Industry Locations

Pipeline Express

Pipeline Express includes a dedicated team that will manage your project through the entire transportation cycle. Union Pacific, along with our logistics subsidiary Union Pacific Distribution Services (UPDS), provides:

- Extensive network of more than 400 off-loading and storage sites available for handling line pipe
- Largest number of 89-foot pipe flatcars in the industry
- Total visibility of shipments provided by Union Pacific and UPDS including proactive logistics management and daily communication
- Visibility of customs status on shipments to Mexico and complete communication among all custom clearance parties

Drill Pipe

Union Pacific drill pipe services provides access to key shale and pipe industry locations. Our extensive network includes:

- Access to about 75 percent of active rigs in the United States (each new rig uses three to five carloads of drill pipe)
- Major distribution locations in key destination markets – team tracks (publicly available) and transload facilities
- Pipe storage distribution yards, processors and producers in the Houston area
- Continued investment in our rail infrastructure, storage facilities and rail equipment to meet growing demand
- Ability to import pipe and deliver to customers

Structural Pipe

Union Pacific structural pipe services provides access to key service center and construction industry locations. Our extensive network includes:

- Routes to the fastest growing population centers in the United States
- Access to steel service centers and distributors in key destination markets
- Transloading and storage sites available for handling structural pipe
- Connections to Mexico and Canada through multiple gateways
- Continued investment in our rail infrastructure and equipment

Union Pacific and UPDS have created a logistics program to deliver pipe to customers. We can work directly with your stevedore or transport your pipe to the UPDS Galena Park Railroad located in southern Texas.
